

FCT::Context::onWindowBound

FCT::RHI::VK_Swapchain
::sync

FCT::IEventSystem<
EventSystemConfig::
TriggerOnly >::trigger

```
graph LR; A[FCT::Context::onWindowBound] --> C[FCT::IEventSystem<EventSystemConfig::TriggerOnly>::trigger]; B[FCT::RHI::VK_Swapchain::sync] --> C;
```

The diagram illustrates two separate function calls, 'FCT::Context::onWindowBound' and 'FCT::RHI::VK_Swapchain::sync', both of which trigger a single event system. Blue arrows point from each function call box to a central gray box representing the event system trigger 'FCT::IEventSystem<EventSystemConfig::TriggerOnly>::trigger'.
