FCT::Flags< ShaderStage
>::operator~

FCT::Flags::Flags

```
graph LR; A[FCT::Flags< ShaderStage >::operator&] --> D[FCT::Flags::Flags]; B[FCT::Flags< ShaderStage >::operator^] --> D; C[FCT::Flags< ShaderStage >::operator|] --> D; E[FCT::Flags< ShaderStage >::operator~] --> D;
```

The diagram illustrates the relationship between four overloaded operator methods and the Flags constructor. On the left, four white rectangular boxes are stacked vertically, each containing a C++ operator method signature for FCT::Flags< ShaderStage >. Arrows from each of these boxes point to a single gray rectangular box on the right, which contains the signature for the Flags constructor, FCT::Flags::Flags. This visualizes that these operators likely delegate their logic to the constructor.
