

FCT::DynamicMesh::draw

FCT::StaticMesh::draw

FCT::RHI::CommandBuffer
::draw

```
graph LR; A[FCT::DynamicMesh::draw] --> C[FCT::RHI::CommandBuffer::draw]; B[FCT::StaticMesh::draw] --> C;
```

The diagram illustrates a call graph where two different mesh types, DynamicMesh and StaticMesh, both utilize the same rendering interface (RHI) to draw. FCT::DynamicMesh::draw and FCT::StaticMesh::draw are shown as separate functions on the left, both of which have arrows pointing to a single function on the right, FCT::RHI::CommandBuffer::draw. The right-hand function is highlighted with a gray background, indicating it is the common target or a more fundamental component in the hierarchy.
