

FCT::TokenGraph::addNode

FCT::TokenGraph::updateNode

FCT::TokenGraph::addNode

```
graph LR; A[FCT::TokenGraph::addNode] --> C[FCT::TokenGraph::addNode]; B[FCT::TokenGraph::updateNode] --> C;
```

The diagram illustrates a mapping or transformation. On the left, there are two source nodes: 'FCT::TokenGraph::addNode' (top) and 'FCT::TokenGraph::updateNode' (bottom). Both source nodes are white rectangles with black borders. On the right, there is a single target node, also labeled 'FCT::TokenGraph::addNode', which is a gray rectangle with a black border. Two blue arrows point from the right side of each source node to the left side of the target node, indicating that both source functions are mapped to the target function.
